

Applicant provisionally elects Arnica Montana as the vasodilator and Lachesis ninta as the mobilizer of white blood cell activity.

Applicant requests reconsideration in view of the proposed change of Section 121 of Title 35 to adopt the unity of invention standard under the PCT. Moreover, under current practice the applicant should be provided a full search since the claims are directed to a single invention and there are not multiple claims except the one now submitted.

The claims are entitled for consideration as a single invention since the claims are so linked together to form a general inventive concept, premised on the concept of a common special technical feature. The Patent and Trademark Office has stated that as long as such a common feature is found, the claims comply with the unity of the invention. (See BNA Patent, Trademark & Copyright Journal Vol. 66, No. 1623, page 89).

Respectfully submitted,

John Lezdey
